Art Unit: 1742

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Newkirk et al. '349 ('349).

'349 disclose the invention substantially as claimed. '349 disclose a method of forming a composite body comprising:

providing a porous compact; and

infiltrating said porous compact with a molten metal by reactive infiltration.

'349 further disclose wherein the porous compact comprises a metal and an oxide material.

Art Unit: 1742

'349 further disclose wherein the oxide material comprises an aluminum oxide powder.

'349 further disclose wherein the molten metal comprises an aluminum alloy.

'349 further disclose wherein the reactive infiltration forms an alumide.

However, '349 does not disclose wherein the process and composition parameters are those claimed by Applicant, but provides for close approximation and/or overlap of the claimed parameters, establishing a prima facie case of obviousness lacking a showing of unexpected results flowing from the parameter selections.
